

Install Stand-Offs

Some of your sensor bars may include sensors that are not at the correct angle. This will result in inaccurate readings.

To solve this problem, install your iceQ 2.0 with **Stand-Offs** to clear the freezer walls as shown below.

Each iceQ Sensor Bar comes with 4 Stand-Offs

Install them against the front freezer wall to create the necessary separation. They simply go between the Sensor Bar and the front of the Freezer wall as shown below.
